

Fertisal®

Water Soluble Fertilizer

AGLUKON's water soluble fertilizers are pure nutrient formations which meet very high quality requirements. Only high standard raw materials are used. The products dissolve immediately in water and do not leave any residues. Purchasing our tailor-made products for specific stock solutions like in greenhouses, you have the possibility to prepare the nutrient solution exactly after the crop's demands.

The formulations can be adapted to all crop requirements. Therefore, it is possible to supply the plants with well-balanced and complete nutrient ratio, or with a very specific one, with the emphasis on particular elements.

For this reason, our soluble nutrient salts can cover both, general and very specific nutrient requirements in the agricultural and horticultural sector.

Key benefits

- Micro-nutrients are strongly and 100% chelated with EDDHA/EDTA
- High efficacy under alkaline soil conditions
- Rapidly available to the plant
- Remarkable residual effect during the growing season

Fields of application

- Greenhouse
- Fertigation with all irrigation systems
- Hydroponics
- Incorporation in growing media
- Outdoor

Fertisal 13-40-13 + TE

The P-pronounced NPK water soluble fertilizer for all crops with trace elements.

Fertisal 15-5-30 - 2MgO + TE

The NPK water soluble fertilizer for all crops with magnesium and trace elements.

Fertisal 20-20-20 + TE

The NPK water soluble fertilizer for all crops with trace elements.
