

Plantosan®

Slow Release Fertilizer

Methylene-urea based slow release NPK fertilizer granules with magnesium and trace elements with a release time of approx. 8 - 10 weeks.

Plantosan is a granular slow release fertilizer containing all macro- and micronutrients. It supplies the correct nutrient amount for plant development over a period of 8 - 10 weeks. As the nutrients are present both in a slowly available and immediately available form, a good starter effect is assured.

Approximately 70 % of the nitrogen exists in the form of methylene urea. This slow release nitrogen component is converted by microorganisms into nitrogen forms which are available to the plants. As this process, just like plant growth is temperature dependent, the nitrogen is supplied in accordance with the plant requirements.

Key benefits

- Complete macro- and micronutrient supply for horticultural crops
- Nutrient release in accordance with plant requirements
- Starter plus slow release effect
- Fertilized substrates can be stored cool and dry up to approx. 2 - 3 weeks
- No salt damages due to high substrate temperatures
- High compatibility for plants
- Mechanical mixing is possible

Plantosan

20-10-15 - 6MgO - 2S + micro

Slow release NPK fertilizer based on methylene-urea with magnesium, sulphur and micronutrients.
